EDUCATION

**MASTER OF SCIENCE (M.S.)
SOFTWARE ENGINEERING •
DECEMBER 2026**

Grand Canyon University
Phoenix, AZ, US

**BACHELOR OF SCIENCE (B.S.)
PSYCHOLOGY •
MAY 2018**

University of Texas at Arlington
Arlington, TX, US

KEY SKILLS

Java, Oracle SQL, JavaScript, TypeScript,
Spring, Angular, Hibernate, React, Node.js
Express, AWS, Jenkins, MongoDB, Docker,
Splunk, WinSCP, Putty

CAREER OBJECTIVE

I am a results-driven experienced software engineer passionate about always learning. I'm accustomed to working and collaborating in a team environment utilizing agile practices. I am seeking a company where I can use my extensive knowledge in application development, configuration management, software architecture and database design. I want to further learn new things and grow as a Software Engineer while contributing to the development of the company.

EXPERIENCE

CAREER BREAK • JUN 2022 -

Took a break for personal development and to explore new opportunities in other industries by doing temp work. Did volunteer work for a couple of years for a church. Acquired and deepened both technical and non-technical skills by completing online courses and projects I want to apply in product management leading me to also pursue my masters. Traveled and spent some time overseas to help widen my global perspective.

TECHNOLOGY ANALYST • OCT 2018 - JUN 2022

Infosys Ltd • Richardson, Texas

- Resolved operational issues through root cause analysis techniques.
- Developed and implemented software applications to align with business objectives.
- Analyzed business requirements and designed technical solutions to meet specific needs.
- Worked with both the latest and legacy technologies to complete tasks such as application development, maintenance, troubleshooting, and logging
- Communicated effectively with technical and non-technical audiences, translating complex technical concepts into clear and concise language.

SOFTWARE DEVELOPER • JUN 2018 - OCT 2018

Revature • Tampa, Florida

- Collaborated with other software developers on design, development and testing of programs.
- Designed and coded new software or modified existing software to add new features.
- Adapted to new technologies and project requirements quickly, demonstrating strong learning and problem-solving skills.

PROJECTS

Bootcamp Agenda Manager (BAM) v3 - Spring

This application provides a method of communication and organization among the employees of Revature. Through various views and chains of command, the application enables users to develop their understanding of their tasks for a typical 10-week training along with allowing certain users to examine previous training sessions. The Bootcamp Agenda Manager implements these goals by existing as a web-based application that allows Associates, Trainers, Quality Controllers and Administrators to collaborate in organizing the curriculum, tasks, evaluation and overall progress of, both, active and inactive Revature batches.

Key Accomplishments:

- Took on leadership role to learn and implement Spring Security to secure the endpoints with another colleague, increasing security by 10% to the application.

Rate Management & Audit - Spring & Angular

This internal pricing web application was created from scratch to replace a legacy product rate system that a select group of users within a major multinational telecom client used to compare rates for the enterprise service pricing wing. It streamlines the auditing and list rate management process by cutting down the bulk of manual processing, reducing time, and saving thousands of dollars for the business. The application allowed users to create requests, search for requests using a filter criterion, and view the details and status of the request including approvals.

Key Accomplishments:

- Worked closely with configuration management team to ensure spring application was compatible and ready to be deployed on Oracle WebLogic
- Switched to lead UI developer in the middle of development to take over the frontend angular application, and successfully completed both frontend and backend use cases in a timely manner for each sprint.
- Trained new offshore developers solely on both the frontend and backend of this application by making sure they are equipped with the knowledge necessary to further maintain and develop the application
- This newer application saved 20 hours of manual processing for our client.
